Contents

Preface to the Instructor iii

Preface to the Student vii

Introduction xiii

I Space and Time 1

1 Position and Change 2

Describing Position 3
Coordinate Systems 6
Describing Changes in Position 10
What to Do When the Car Turns a Corner 14
Saving a Few Steps? 16

2 Describing Motion 22

Is It Moving? 23
Describing Motion 24
Answering Other Questions 25
Average and Instantaneous Descriptions of Motion 27
Describing Changes in Motion 30
Pedal Power Plus 34
Analyzing Motion with Photography 35

3 Relative Motion at Low Speeds 41

Moving Reference Frames 43
Rolling Right Along 45
Relative Speed and Velocity 47
The Principle of Relativity 51

4 Special Theory of Relativity 58

Why a New Theory? 59
Relative Velocity at High Speeds 62
Simultaneity at High Speeds 64
Time Intervals at High Speeds 66
Time Drags On 70
Twin Paradox 72
Length Contraction 72
Fisk's Disk 75
How Fast is Fastest? 77

Interlude: Past, Present, Future, and Elsewhere 83

II Interactions and Forces 85

5 Interaction and Momentum 86

Interactions 87
Factors Affecting the Interaction 88
Momentum 90
Conservation Logic 94
Conservation of Momentum 96
A Very Stubborn Earth 99
Interactions with Large Masses 100

6 Interaction and Force 107

Forces—A First Look 108
Force and Change in Momentum 110
Lengthening the Collision Time with Pedestrians 114
A Force Is a Force Is a Force 115

Kinds of Forces 118
More Than One Force 120
Force, Acceleration, and the Speed of Light 124
Off Tall Buildings in a Single, Safe Bound 125

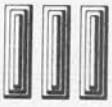

7 Newton's Three Laws 132

Newton's First Law 133
Newton's Second Law 136
Accelerated Reference Frames 140
Helping "Mom" 143
Newton's Third Law 143
All Three Laws 146

8 The Fundamental Interactions 153

Gravitational Interactions 154
What Is It Like on Mars? 157
Electromagnetic Interactions 158
Nuclear Interactions 164
Thanks to Electrical Charge . . . 165
Interaction at a Distance 166

Interlude: Each Step Beyond 175

Energy 179

9 Energy 180

Interaction, Work, and Energy 181
Energy of Position 184
Energy and Motion 189
Energy Is Conserved 191
Throbbing Motion 193
Easier than Walking? 195
Energy Takes Many Forms 195
Changing Energy Forms: Canine to Kinetic 199

10 Thermal Energy in Matter 206

The Energy Stored in Matter 207
Temperature 209
Thermal Energy Transfer and Changes in Temperature 213
Blankets to Keep You Cool 215
Hot, Cold, and Lukewarm 218
You Cannot Sleep if the Flowers are Cold 220
Thermal Energy Transfer and Change of State 221
Really Cool Tea! 227

11 How Thermal Energy Is Transferred 233

Convection 234
Floating from Town to Town 237
Conduction 238
Closer is Warmer 243
Cost of Heating a Home 245
Radiation-Absorption 246
All Three Processes 249

12 Thermodynamics 256

The First Law of Thermodynamics: You Can't Get Something for Nothing 257
Something for Nothing—Almost 261
The Second Law of Thermodynamics: You Can't Even Break Even 263
How Well Can We do? 270
The Second Law Gets in the Way, Too 271
Entropy and the Universe 276

13 Atoms, Molecules, and Thermal Energy 281

Inside Matter 282
Inside the Molecule 284
Thermal Energy in Transit 287
Second Law of Thermodynamics 290
A Philosophical Conclusion—Or Is It a Beginning? 293

Interlude: Social Issues and the Energy Crisis 298

IV Waves and Particles 301

14 Making Waves 302

Wave Motion 303
Characteristics of Waves 306
Moving Sources and Receivers 311
Using Doppler Shifts to Measure Speed 313
Waves Meet Matter 314
Waves Meet Waves 318
Getting the Message Across 327

15 Waves: Sound and Electromagnetic 333

Wave Classification 334
Sound 340
Electromagnetic Waves 348
"Seeing" the Bait 354
Right Off the End of the Piano! 357

16 Interference and Diffraction 363

Interference Patterns 364
Describing Interference Patterns Quantitatively 370
Interference Phenomena 371
Interference and Acoustics 375
Diffraction Patterns 376
Diffraction and Resolution 379
Waves Versus Particles 381

17 Wave-Particle Duality 387

The Particle Nature of Waves 388
Seeing with Photons 394
Wave Nature of Matter 396
De Broglie Wavelengths 397
Wave-Particle Duality 400

18 Light, Quanta, and Atoms 406

Light Spectra and Atomic Structure 407
Matching the Emission Spectrum 413
Lasers 414
The Quantum-Mechanical Atom 418
Probability and Uncertainty 424
Heisenberg's Uncertainty Principle 427

Interlude: Newton to Heisenberg 434

V From Electricity to the Nucleus 437

19 Turning on the Lights 438

Sparks and Lightning 439
Electrical Circuits 440
Taking the Light With You 443
Circuits, Resistance, and Safety 446
Energy Transfer in Circuits 448
More Than One Receiver 450
Why Do My Christmas Lights Burn Out So Fast? 455
Calculating Resistance in Parallel Circuits 457

20 Electromagnetism 464

Magnetism 465
Storing Information with Magnetic Domains 469
Electric Currents and Magnetic Fields 470
Move, Cow, Move 473
Electromagnetic Induction 476
Electromagnetism 482

21 Radioactivity 488

The Nature of the Nucleus 489
Nuclear Transformations 492
Alpha Decay 496
Beta Decay 497
Beta Decay in the Study of Art 499
Gamma Decay 500
Half-Life 503
Half-Lives in Archeological Dating 505

22 Nuclear Energy 513

Binding Energy 514
Nuclear Fission 518
Nuclear Fusion 525
The Bomb 527
Nuclear Radiation and the Human Body 531

Epilogue: Science, Technology, and Risk 536

Appendix A: Systems of Measurement 538

Appendix B: Powers of Ten 541

Index 543

Photo and Illustration Credits 548
